

E-cigarette use among 14 and 15 year olds: Results from the 2016 Youth Insights Survey

Males were **2 times** more likely to be currently using an e-cigarette than females

“Current” e-cigarette use is defined by daily, weekly, or monthly use.

“At least weekly” and “At least monthly” use are cumulative, e.g. “At least weekly” includes both daily and weekly e-cigarette users.

The Youth Insights Survey (YIS) is a nationwide paper-based survey conducted in schools every two years, and is part of the New Zealand Youth Tobacco Monitor (NZYTM), a collaborative effort by HPA and Action on Smoking and Health (ASH). The 2016 YIS

was conducted with a sample of 2790 Year 10 students aged 14 to 15 years old. A full description of the 2016 YIS methodology and further YIS publications can be found at www.hpa.org.nz/research

E-cigarette use among 14 and 15 year olds: Results from the 2016 Youth Insights Survey

Māori young people were **2 times** more likely to be **current** e-cigarette users than NZ European/Other young people.

Asian young people were **less likely** to be **current** e-cigarette users than NZ European/Other young people.

Māori young people were **4 times** more likely to be **daily** users than NZ European/Other young people.

Only significant differences are described.

“Current” e-cigarette use is defined by daily, weekly, or monthly use.

“At least weekly” and “At least monthly” use are cumulative, e.g. “At least weekly” includes both daily and weekly e-cigarette users.
